

PROFESSIONAL
CRANE SCALES

MCW

SAFETY WITHOUT COMPROMISE

The MCW series crane scales are manufactured in conformity with the European legislation, in terms of lifting appliances safety standards: 2006/42 CE; UNI EN 13155/2009; UNI EN 13889; 2014/30/EU.

The components used in the manufacture of our crane scales are **inspected** by an experienced and competent team. Our load cells are put through stringent **safety tests**. The MCW crane scales have a **breaking load** which is 5 times more than their nominal capacity (K5).

Every crane scale is supplied with a maintenance manual where the recommended periodical inspection test can be recorded. Adherence to our recommend maintenance routine will always guarantee the best performance in complete safety.

S E R I E S

HULK

Sturdy and reliable, it allows you to weigh and move the lifting load.

For permanent fitting to lifting system

Suited to the load's handling

Suited to lifting the load

CAPACITY:
from 10.000 kg
to 35.000 kg

For indoor / outdoor

PERSPEX PROTECTIVE SCREEN

RECHARGEABLE BATTERY FOR CONTINUOUS USE 24/7

40 mm SUPER-BRIGHT RED LEDS DISPLAY

REINFORCED STRUCTURE

S E R I E S

PROFESSIONAL

Crane scale designed to weigh outdoor and in harsh industrial environments. Stainless steel construction.

Suited to
lifting the load

CAPACITY:
from 3.000 kg
to 50.000 kg

For indoor / outdoor

40 mm SUPER-BRIGHT RED LEDS DISPLAY

BODY FULLY CONSTRUCTED IN STAINLESS STEEL

RECHARGEABLE BATTERY FOR CONTINUOUS USE 24/7

S E R I E S

NINJA

Battery power supply, also rechargeable, for continuous cycle weighing.

Suited to
lifting the load

CAPACITY:
from 300 kg
to 9.500 kg

For indoor

APPLICATIONS

1.

Multi crane scale applications to weigh tubes, beams and other large loads.

Weight repeater with large digital display for long distance viewing.

Weight repeater integrated printer.

2.

Application using one crane scale and two or more repeaters, in order to read the weight from any direction and from different positions.

3.

Application with palm-sized weight repeater and real time data transmission, via radio to the PC.

4.

Application with palm-sized weight repeater, with integrated weighing memory.

5.

Network data transmission via Wi Fi.

6.

Tablet and smartphone weighing management, through specific apps.

DATA COMMUNICATION

Thanks to the wide range of interfaces available, it is possible to connect one or more weight repeater, PC, and mobile devices to the crane scale.

WIFI

BLUETOOTH

ETHERNET

FAQ

CHOOSE THE RIGHT MODEL

1. Use: permanent installation or temporary use?

Choose the MCW “Hulk” model when necessary

- fit the dynamometer permanently to the lifting system
- handle* and lift loads other than weighing.

Choose the MCW “Ninja” or MCW “Professional” models when necessary

- always have dynamometer on hand, to quickly weigh directly where needed.

2. Working environment: External or internal?

Choose MCW “Hulk” and MCW “Professional” models for use in outdoor or high humidity and harsh indoor environments, thanks to their high degree of IP protection against dust and rain.

Choose the MCW Ninja model for indoor applications or temporary outdoor applications in compliance with their degree of protection.

3. How to choose the right capacity?

In general it is advisable to buy dynamometers with a capacity equal to or higher than that of the lifting system. For continuous heavy-duty use, it is recommended to choose oversized capacities, even double that of the maximum load to be weighed.

4. What is the best accuracy?

Suspended weighing is the most accurate weighing system, because it cancels any friction and is not affected by the load shape. Nevertheless, it is important to remember that a dynamometer with an inadequate accuracy provides inaccurate weight measurements, which when multiplied by thousands of weighs a year, causes major losses. Certified weighing accuracy up to at least 0.05% of the lifting capacity allows the weighed material to be read properly.

5. Why choose compact sizes?

A dynamometer with a compact size allows the system’s lifting space to be better used, and lets you easily weigh bulky items. The compact sizes also facilitate the handling manoeuvres.

6. For internal use or in relation with third parties?

When the weight detected by the dynamometer is used in relation with third parties, you must choose dynamometers approved in accordance with the metrological regulations.

* Consult the user manual for further details.
